ATHAN WALKER

FULL-STACK SOFTWARE ENGINEER

Avon, CT (Remote/Hybrid/In-Person) • (520) 465-7691 • athanjwalker@gmail.com • www.linkedin.com/in/athan-walker

SUMMARY

Frontend-leaning Full-Stack Software Engineer III with 4+ years of experience delivering enterprise onboarding applications using React, Java, and REST APIs, including accessible user experiences aligned with WCAG and WAI-ARIA. Experienced in developing user-focused features, backend integrations, production support, and cross-functional collaboration. Seeking a full-stack software engineering role focused on frontend development and user experience.

SKILLS

- **Languages:** Java, JavaScript, TypeScript.
- **Frontend:** React, Redux, HTML, CSS, WCAG, WAI-ARIA.
- **Backend**: REST API design, JWT-based authentication, business logic.
- **Development Tools**: Git, GitHub Copilot, Cursor.
- **Testing:** Jest, JUnit, Cucumber.
- **DevOps & Observability:** GitHub Actions, XLR, Jenkins, Splunk, FullStory, feature flags.
- **Practices:** System design, reusable architecture, CI/CD, Agile delivery, production support, code review, technical mentorship.

EXPERIENCE

American Express – Software Engineer III

August 2022 – August 2026

Promoted from Software Engineer II in under two years

- **Owned full-stack development** of a corporate onboarding platform used by 640+ sales representatives across the United States, United Kingdom, and Australia, supporting thousands of client onboardings annually.
- **Built a client-facing portal** extension that enabled self-service onboarding for hundreds of external users each month.
- **Designed and implemented eight REST APIs** using Java and JWT-based authentication to support read, update, submission and validation workflows.
- **Developed authentication and user verification workflows** for the portal, improving access control and protecting onboarding data.
- **Reduced downstream defects by 56%** through targeted pull request reviews, independent testing, and earlier detection of business logic errors.
- **Delivered dozens of accessible React features end-to-end** using WCAG and WAI-ARIA where appropriate, from design through production release, while maintaining reusable, testable, and concise code.
- **Supported daily production deployments**.
- **Partnered with product owners and business stakeholders** to define onboarding workflows, balance user experience, identify edge cases, and address business needs.
- **Built and maintained** GitHub Actions and XLR CI/CD pipelines with automated testing, quality gates, and deployment workflows, improving release consistency.
- **Served as technical team lead** for architecture decisions, production issue resolution, and delivery within a 2-week Agile sprint cadence.
- **Mentored** three engineers on codebase architecture and delivery practices. Separately supported eight new hires across engineering and product-owner roles through the company's buddy program.
